ACTIVITIES OF PSYCHIATRY WITH PROBLEM CITIZENS

I have read the coverage of this case and... The case conveys a lot about possible injustices, provocations, irritation and drug treatment for a disease that doesn't even exist medically. After studying all the actions of blackened mental health patients, drug treatment with chemical compounds similar to rat poison would seem to be the last rivet that sealed the actions of the persons as it happened to Ylivieska's church as well. The person directed his anger at the church next to the hospital, which to some extent represented a social building where the mistreatment could be dismantled as revenge. Then, with only half-false medical reports, without excuse, sent to a prison mental hospital for the rest of his life when the legal representative is seen in court in a passive form and the person is under strong medication in a completely incompetent condition, and the person cannot defend himself in any way against non-existent mental illnesses. According to the news, this person heard voices, so it would be really nice if someone could tell the psychiatrists treating him that it is normal for humans to hear voices, because we have ears in our heads.

2. KAUPPILA: THAT'S FINE. WHY DID YOU TAKE THESE MEDICINES, YOU HAVEN'T TOLD ME ANYTHING ABOUT THEM. THEY CAUSE STRANGE SIDE EFFECTS LIKE BLURRED VISION.

5. KAUPPILA: YES, I HEAR, AND HERE IS THE PEN YOU SAID YOU WANTED.

8. KAUPPILA: WHAT THE HELL ARE YOU TALKING ABOUT, YOU DON'T RECORD ANY SUCH STIGMATIZING CRAP IN MY PATIENT RECORDS. COME ON, WHAT KIND OF NURSES YOU ARE. IF THOSE TEXTS DON'T GET OUT OF MY HANDS, I'LL BURN THAT SIDE OF THE CHURCH WHEN YOU PISS ME OFF LIKE THAT.

1. NURSE: HELLO. WHAT'S UP, HOW ARE YOU?

3. NURSE: THE PLACE WHERE THE MEDICATION TAKES YOU, THE LEAST OF YOUR WORRIES IS BLURRING YOUR VISION. TO BE HONEST, THE PLACE YOU'RE GOING TO IS ONLY BETTER IF YOU LOSE YOUR SIGHT.

4. NURSE: NEXT, LET'S DO A SMALL TEST RELATED TO YOUR HEARING. CAN YOU HEAR ME AND IF YOU CAN, YOU COULD TELL ME AND AT THE SAME TIME GIVE THE PEN FROM THE TABLE.

6. NURSE: DID YOU ALL HEAR ME NURSES!! THE PATIENT HEARS VOICES TELLING IT THAT THE PEN SHOULD BE GIVEN TO US.

7. NURSE: YES, WE WILL LISTEN TO EVERYONE AND ADD A LITTLE MORE LAPLAND TO THE PATIENT RECORDS. THIS IS REALLY WORRYING IF AT THIS POINT THE PATIENT ALREADY STARTS TO HEAR VOICES OR WHAT GIRLS...HAHAHHAAA

Just as Tony Roth TYKS of psychiatry told me during the interview he gave me, "here only experiences are given" and when experiences are created for the patient to which he reacts under the influence of drugs that may prevent the ability to reason logically to some extent, the reaction can therefore be very impulsive resulting in a semi-false registration marked in connection with the patient meeting by the participating nurses. Because this person had also applied for psychiatric treatment with his own problems in the belief that he would get help for his problems from the services that are advertised in the news like Christmas all year round, which, however, would seem to differ from the reality so much in their commercials that our society in general is the actions of these psychiatric patients.

Wrong medication

This activity is extremely overrepresented in the activities of psychiatry, which can be seen from the cases of all citizens that I have examined. Psychiatry can attract its problem citizens with positive advertising to its own clinics, which aims at drug treatments based on the patient's behavior. After succeeding in this, the patient is tricked into believing in these diseases by exploiting the credibility of the state authorities, the justice of which is given by the former head of the drug unit, Jari Aarnio, as a good example of what can be done in the name of credibility and justice created by these institutions, and what actions are being taken to support the non-medical psychological diseases promoted by the general propaganda machine.

Framing

I have a strong belief that the medical care saw this person as a human rat with an imaginary disease, so they started to build a "mentally ill" patient's medical record for this person by recording half-false stories that enable the side effects of the medication.

Psychiatry that enjoys great protection from other authorities such as the police and the courts, who are so happy to identify with the statements of psychiatry without any questioning in their direction, even though we in Finland have managed Finland's largest drug trade directly from the police headquarters.

A court that makes unjust decisions

The courts that fully accepted the evidence presented, on the basis of which Kauppila was completely incapable of making decisions about himself, is entirely due to the chemical compounds that decrease and destroy brain functions fed by psychiatry.

It's downright unbelievable to see how great a position medical psychiatry has pushed itself into with its almost inexplicably large knowledge and which it has begun to misuse in this way with problem citizens.

A police officer who conducts criminal investigations with his eyes closed

The Finnish police, who in this investigation did not see any connection in the actions of psychiatry, whose specialty, having investigated cases, is staging patients, drugging them and finally provoking them into an act that shocks society, which is the last revenge and defense of these patients, accompanied by anger and rage, against the official corruption they have drifted into.

The police who, like all the authorities, accuse these new-age witches blackened by psychiatry for these actions are all like a mirage from the Middle Ages and where the actions of the Finnish authorities have all been driven very purposefully.

<https://www.mtvuutiset.fi/artikkeli/lehdet-ylivieskan-kirkon-poltosta-epailty-havisi-kuukausi-sitten-huoltajuusriidan/5815788>

Defense of Jouni Kauppila

"During the preliminary investigation, the accused from North Pohja has not been able to find out the reason for his act. He doesn't comment on church fires in general, and he doesn't comment on whether he was in any way angry with the church or the congregation."

"However, the man admits that he felt it was wrong that his youngest child was baptized without his consent."

"The matter has been gnawing at me a bit when I was not asked anything. I feel that the priest committed an official misconduct in the case, the accused says during the interrogations."

The statements made by Kauppila with "drugs" that reduce brain functions for 3 years can no longer be held in the same value as before psychiatric diagnoses and medications because he may have repeated the half-false explanation given by anyone "psychiatrist".

A store that has most likely been seen only as easily "deferred" to the mental hospital business, which is well known for its human rats that act as natural resources for medicine and with which the professors of the University of Turku get a boost in their academic careers.

<https://www.finnishcrimereporter.com/jarmo-psychosis-hietala>

Provocation

At this stage, the patient's treatment meetings are apparently only interpreting the patient's condition, where the effect of the drugs on the cognitive functions and the patient's reaction to the discussions are monitored. A few years of continued "therapy" with drugs must have left a mark on this guy's psyche, after which socializing has become difficult and the inability to remember conversations is obvious, and the half-false patient records would not seem so staged. After this, patient meetings can already be changed to provocative and belittling, and the reaction to this is most obviously aggressive. Behind the link below, you can find a similar case, where there are indications of provoking and annoying the authorities.

<https://www.mtvuutiset.fi/artikkeli/video-mies-murtautui-kirveella-mielisairaalaan-ja-pakeni-pakkohoidossa-olleen-naisen-kanssa-holtiton-kaahaus-paatty-piikkimattoon/8191010>

The following threat can be found in the background of this person, which is a text borrowed from the news:

"He had also threatened two employees of the municipality's social services with an explosion, and in addition he threatened to ride a motorcycle through the glass wall of the Naantali town hall. The actions were related to the officials' decisions towards the man's family."

<https://www.finnishcrimereporter.com/anna-maja-henriksson>

Because of the former, the inappropriateness and deliberate provocation of the Ylivieska church arsonist's treatment during medical treatment cannot be ruled out, because the authorities' treatment of these slandered patients is thus clearly visible. Hopefully, in the future, we will get the cases under criminal investigation and the authorities who deliberately stage, annoy and provoke these slandered patients to court.

The person in the Ylivieska church arson case had an "illness" for about three years (2013), which may have been treated. These drugs have many kinds of effects on the person, such as stimulating or depressing effects. Because I suspect staging actions with drug therapy, the therapist is certainly aware of the effects of various drug compounds on the person they are fed. The drugs that are fed to this person's imaginary disease are high-class chemical compounds, so stage actions, if there are any, are much easier when the person is in a partially excited state and part of the brain functions are paralyzed by some other drug. Apparently, it's already going pretty well in court without excuse.

MISCONDUCT OF COURT WITHOUT EXCUSE

In the courts, it was no longer a problem to bypass the legal system with the help of a few years of medication and medical reports, citing lack of blame when looking at what this person had committed and what their current mental state was. Whether it was the treatment that crucified the fate of Ylivieska Church on 26.03.2016 is of course my guess

I'm not saying that this person didn't have problems in his private life, he certainly did, but that he is staged as mentally ill in our medical care unit and sentenced without charge to a prison mental hospital for the rest of his life run by the friend club of Auervaara in Kerava for the human rat business of medicine, which, however, is completely due to medical care. Since impunity requires incomprehension of the act, I am absolutely sure that this guy's drug addiction has somehow benefited the situation in court.

I personally believe that people can learn and develop. Even if it was a church arson, the verdict should come according to the court without impunity, because there are witch hunts against mental health patients going on in the country and these people who have been slandered by psychiatrists with non-existent diseases will not get impartial treatment or a verdict in our country. The burning of the church outside, in my eyes, looks like a crime of hate and revenge, and possibly some kind of abuse that came out of a person in this way. The cases that I have studied by reading the news and by learning about mental illnesses, every accident by these medically blackened persons would most obviously have been left undone if they had not had medication that reduces the persons' logical reasoning ability, which exposes the persons to such atrocities when provoked and driven into a corner, e.g. Lubitz, Esa Saarinen's stabber, Emilia Nieminen's murderer, Sannaa Sillanpää.

Of course, I hope that Finnish medical care will still be held liable for drugging these patients with modern-day conversion drugs, from which the actions stem. As well as people who have been actively building operational models in Finland for medically non-existent witch-hunt mental illnesses, which help to get society's problem citizens into mental hospitals as a natural resource for medicine and as a research resource for the University of Turku.

PEOPLE'S PURIFICATION CARRIED OUT IN THE NAME OF PSYCHIATRY

I personally can't think of any other answer than that these people are in some way really expensive for society to consider medical care among the healthy, and that psychiatry itself prefers to see these people as an opportunity to pour into Mother Nature's Holy Grail, i.e. the human rat, with which medicine and the academic careers of researchers are taken forward with great strides. Could this be influenced by the person's attitude towards our society, which ruins Finland as an equal country if a citizen is not allowed to live here free from official corruption if he disagrees on some issues.

Was the person's attitude to life just so awkward and repulsive that the Ylivieska medical staff decided together that now this guy will be staged into a non-existent mental illness so that he no longer needs to be watched here. This leads to the question of what these so-called services advertised by psychiatry are actually for, like attracting the most problematic group of our society to be smeared and staged by them.

Crimes committed in the name of psychiatry

Violations of the patient's rights by medicating him for a disease that does not even exist medically (schizophrenia) and which as a disease represents the cruelties of the most merciless beast on earth, the white man, towards his own. Medical malpractice

The use of medicine towards people in order to hurt and stage the patient into a non-existent disease, which, however, is fed with harsh chemical compounds whose effect on the person's behavior and brain functions is undeniable. Medicine against Humanity

A plea of not guilty, wrongfully ignored in the court, which is the result of the drugs given to the person, which has played a big role in staging the person and bypassing the court. Biased court decisions with psychiatry's own expert testimony about its staged patient

MEDIA WHICH SPREADS NEW-AGE WITCHCRAFT

This news from Kaleva proves the state of the Finnish "free press" and what it means. A media that has power and the opportunity to abuse it so much that it is creating a new minority group, almost in cooperation with the authorities of our country.

<https://www.kaleva.fi/kirkon-tuhopolttajia-on-kuvailtu-sanoilla-hiljaine/1719105>

JOENSUU CHURCH BURNING

The case of the river direction is completely different from Ylivieska's case, where Ylivieska's hospital has been misedicating Kauppila and possibly provoking him, from which there are 100 sure indications of Kauppila's behavior in connection with the church arson, which conveys clear anger and rage that he directed towards the social building.

Joensuu's case is more on the side of "unbelievable" acts. It's hard to say what the motive was in this case, but from this we can see where the problem citizens of our society go when they are bombarded with mini-salary jobs and not included.

<https://www.mtvuutiset.fi/artikkeli/tallinen-on-yksi-joensuun-kirkonpoltosta-epaillyista-sai-toita-saalista-poseerasi-kirkon-edessa-vain-pari-viikkoa-sitten/7090504>

CHASES FOR PROBLEM CITIZENS

Even though Finnish decision-makers are helping these people, they don't do that, they distribute taxpayers' money to their own "friends" for organizational activities that do nothing for society other than keeping their own friends with good salaries. However, the truth behind what our country's decision-makers say, based on several cases, is that they actually lure these potential problem citizens to psychiatric clinics to be smeared before their actions and take them to mental hospitals in the name of suicide, of which there are already many examples.
