VALVIRA'S OPERATIONS IN FINLAND	10

Jimi Karttunen, a Finnish citizen, for whom a "natural" death was arranged by joint forces in Finnish medical care, to avoid spending tax payers' money gratuitously under the guise of a post-traumatic metabolic reaction, which was interfered with in the medical care side in every possible way

Jimi Karttunen's case has raised similar indications from the information given to the news about the unjust actions performed by the medical care, ignoring the patient's rights, as what the medical care is also guilty of with regard to mental health patients, which is already approaching a national cleansing, if it were even a little bigger.

This action by psychiatry, where it blames its patients at the same time as it feeds them compounds like rat poison, which are behind all the school deaths in Finland and the perpetrators who shock the community, the suicides of these patients are more the desired outcome of medical treatment for which they are preparing problem citizens who simply cannot be drawn to be led by the University of Turku and medical To the Holy Grail, i.e. to the human rat business, which act as the natural resources of medicine, being more valuable than gold measured by weight to the academic careers of professors at the University of Turku.

POST-TRAUMA METABOLIC REACTION FROM WHICH KARTTUNE DIED

Jimi Karttunen suffered a brain hemorrhage or some kind of brain injury from a jump kick at the station square in September 2016. A week later, the person felt unwell and called the emergency number, after which he lost consciousness. He was found the next day unconscious on the floor among jars of rivatril. Because of this, in Meilahti, he was treated as a poisoning patient, as a result of which antibodies to several drugs were "pumped" into him.

Medical staging

If we look at what Jari Aarnio did on the side of the police and what all is an unexplored field, how many innocent problem citizens are in our country's prisons when the criminal investigations focused 100% only on Aarnio's drug barrels and illegal businesses with the tipster Keijo Vilhusen than if it had focused on the people staged by the police.

All of the medical treatment is like something from Jari Aarnio's diary, and I could swear to Minna Pass's abilities that the first aid itself applied the prescription drugs it prescribed in the victim's apartment when he was lying on the floor unconscious due to a post-trauma metabolic reaction.

A lawyer's dirty murder in a nursing home

Finnish medical care where it is possible to murder problem citizens from spending the state elite's money with lawyer-like dirty interpretations of the law whose real purpose is the complete opposite of what the real purpose of the laws should be.

Karttunen, who was appropriately treated as a poisoning patient, even though he was having a post-traumatic metabolic reaction that should have been supported in intensive care so that his body could survive this reaction. Completely contrary to the ultimate existence of medical care, antidotes to all poisons were pumped into Karttus just to be sure. Leif Sevoni-like legal interpretations, which were once the basic pillars of our rule of law, are today only opinionated interpretations of Maija Lindgren's Tupu Tupuna, in the name of which dictatorships are carried out in our country, in the name of democracy, of course. These actions actually interfered with the metabolic reaction that was going on in him and unlike being done by a layman, being done by professional personnel and actually being informed of where this action is going makes it murder.

This post-trauma metabolic reaction can be found in Chapter 2 of the Traumatology book.

Kröger,H.,Aro,H.,Böstman,O.,Lassus,J.,Salo,J. 7. täysin uudistettu paino 2010. Traumatologia. Kanditaattikustannus Oy ja toimituskunta. ISBN 978-951-8951-21-9

Medical treatment that smears its patients

It was reported about Karttus that he had left the department numerous times and used drugs classified as drugs in the department. It is really outrageous for the medical care to leak this kind of stigmatizing information about the patient to the press, because they themselves are directly forcing these new-age drugs on our country's mental health patients, and the use of the word drug is only distinguished by a doctor's prescription. Karttunen obviously couldn't have taken any more different "drugs" than what our country's medical care has possibly even given to Ylivieska's church arsonist, or force-fed to problem citizens in mental hospitals using compulsory treatment laws. These modern conversion drugs are talked about very positively in the advertisements of Yle's propaganda machine, which is justified by the fact that the majority of people take these drugs. When it comes to medical responsibilities, these drugs work in a negative context, which is used to avoid one's own medical responsibilities and to shift the responsibilities to the patient. They would have leaked out now that "it was also smoking outside"

Karttunen, who was reported to have left the hospital several times, is more the cause of the medical care itself when they leave these problem citizens to fend for themselves in the hospital. Secondly, this kind of reporting on the bureaucratic nature of medical care always tells about its true purposes. This news reports that our hospital is a prison-like facility where the patient should be treated in a bureaucratic manner.

In the case of Karttusen, we do not get to interview how he has been treated in the medical care, but if we look at the treatment of patients blackened with mental health diagnoses in our country in our medical care, they receive almost 90% provocative treatment together with medical treatment, in which case they commit acts that shock the community as a result of being medicated by the medical care. Because of this, it is not too farfetched to suspect that Karttusen's leaving the hospital was a case of belittling and discarding the patient, to which he of course reacted by leaving based on bad treatment.

The biggest reason for Karttunen's leaving the hospital was the treatment he received from the medical care side, where he may have been intentionally abandoned in the hospital and no one has maintained patient contact with him so that he could feel welcome in the hospital.

1. Doctor: Now listen to me, my subordinates, nurses. It is a drug user who is really expensive for us to maintain without any effort. That money is out of the medical care budget, in other words, an obstacle to your salary increases. If we now play this guy in the grave by denying him basic medical treatment and ignoring the patient's rights, which of course means that we give him such a service that the guy starts to realize that it is better to leave here and go home, where it is good to die of post-traumatic metabolic reactions. Here is a seam for you nurses to get salary increases, but it comes at the expense of the lives of these problem citizens and remember, girls, that the size of the salary on the tax payers' pay lists is determined by how illegal the profession carries out in the country behind the curtains, hidden from the public.

Nurse1: You heard what the doctor said, we just drive the guy home, waiting for a natural death due to a metabolic reaction after the trauma, which we could prevent by supporting this reaction in intensive care, but when it comes to a citizen who is expensive for the taxpayers to maintain, then not to the grave, but by denying good care, which leads to our salary increases through intermediaries.

Nurse2: I never would have imagined the kind of power that nursing and its chief physician have in our country when I started working here. We can hand out death sentences under the guise of natural deaths and blame patients for, for example, unhealthy lifestyles, and by denying everything in an Aino Nykoppilike way and, if necessary, explain events with the human body's complex chemical reactions and how everything is caused by millions of different variables. If this is not enough, the last thing is mental illness, which we can reduce with the help of corrupt cooperation patterns together with the management of the University of Turku and VTH.

First aid arrival at Karttunen's

The person called the emergency number, which probably informs the hospital that an ambulance is needed. The ambulance will come the next day. In the end, this kind of "just following the law" performance is not even close to situations where you really want to help the patient.

1. Karttunen: Onko 112, mulla tuli yhtäkkiä huono-olo, voittekulla hakeen, mä sain aivoverenvuodon viikko sitten

2. 112: Me laitamme auton pikaisesti tulemaan sinne.

3. Ensihoitohlö: Kuulitteko, se on se Karttunen, yhteiskunnalle kallis elätettävä joka on esteenä miedän palkankorotukselle, ollaanko me menossa pelastaan se.....NO EI HITTO OLLA. Katsokaa mitä laki sanoo paikalle tulosta kun soitto tulee 112, me mennään sinne lakia hipoen sitten ja tehdään juuri se nippanappa hipoen suoritus nyt jätkät niin saadaan yks pois syömästä veronmaksajien rahoja, eli meidän palkan korotuksia. joos siellä on lääkepurkkejä niin sotketaan mestat ja nakellaan purkit sen viereen, ulkona oleva tulee sit paikalle kirjaan näkymät niin voidaan sanoa ettei kukaan valehdellu ku kirjaaja ei tienny totuutta ulkonaolon takia.

If at this point it is decided to delay a bit and then when you get to the hospital, even though I am not like a layman, then it is decided to pump several antibodies to this cerebral hemorrhage patient, so you can't help but wonder! If this person had post-trauma metabolic reactions in the body, which should not be interfered with under any circumstances but should be supported in their functioning, then at least the pumping of antibodies does not support anything. Traumatology chapter 2.

Kröger, H., Aro, H., Böstman, O., Lassus, J., Salo, J. 7. täysin uudistettu paino 2010. Traumatologia. Kandidaattikustannus Oy ja toimituskunta. ISBN 978-951-8951-21-9

POLICE ACTIVITIES IN THE INVESTIGATION OF AUTHORITY CRIMES

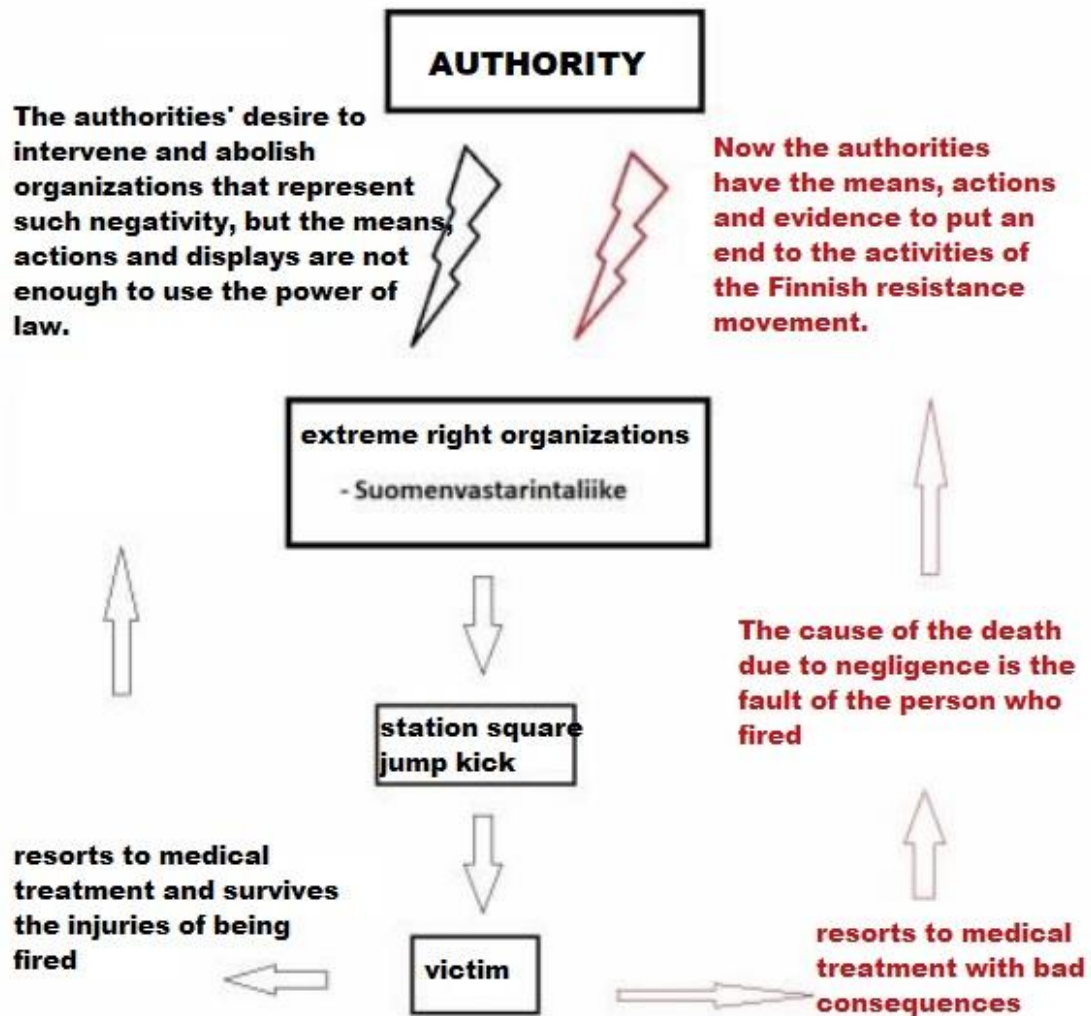

In the cases that I have become familiar with based on the news, there are clear indications of the reluctance of the Finnish police to investigate cases using their own expertise and to take advantage of the cooperation of the authorities in relation to the cases.

Although the Finnish police investigated the actions of the medical care due to Karttusen's death, its investigations did not lead to anything, which is quite clear when it comes to these cases where an authority investigates the possible culpability of another authority in relation to procedures where a patient dies under uncertain circumstances. Because the hospital, Valvira and the cause of death investigation are unnecessarily close to each other, it is very doubtful whether we will get truthful results depending on, for example, Karttusen's case from his doctor, who may have been somehow involved in arranging Karttusen's natural death, because the Finnish authorities' supervision is completely behind the scenes, the authorities' supervision is only nominal if we consider, for example, the corrupt members of the University of Turku professors' activities in our country and the treatment of these second-class citizens in our medical care, who operate in an area completely free from police criminal investigation, and Valvira is full of "own friends".

For mental health patients, these "Karttusen"-like investigations by the police are very typical procedures, which are also very familiar to Dr. Lauerma, excellence and ignorance are used as needed. When it comes to responsibilities, our doctors throw themselves completely incomprehensible with their "something inexplicable has happened" statements. Having familiarized myself with medical science, I do not believe in the lack of understanding of any doctor, but the background of these misunderstandings is always staging or some other malpractice or unfair action, which is avoided with this lack of understanding. Just like in the case of Karttusen, where I highly doubt that a natural death was arranged for him at such a convenient time with the doctors and a few members of the medical staff. Of course, excellence is used when you really want to push through something like what you have acquired in our society, and the use of this excellence is best seen when you look at the kind of dominance that medical care has gotten itself into in our society when it seeks out from the courts its innocent clients, their slandered clients of psychiatry, on the basis of fictitious illnesses, which with the greatest in part, they are all due to the drugs given to these diseases. Nursing has pushed itself into the role of a cookie-cutter church in our society with its own, almost inexplicably great scientific excellence, but it has begun to use this confidential position of power in the form of the roles of hangman, judge and con man without any citizen noticing.

The benefits of Karttusen's death for the authorities with the help of medical care

Because Karttunen's death is associated with a lot of uncertainty regarding treatment. In the news, you can read possible staging situations, indifference in medical care towards the patient, and I'm not surprised at all when I look at the patient's history. If this person was allowed to die on purpose even though he could have been saved, who benefits?

Authority benefit

At the moment, the result of Karttunen's death was that the reasons for the death in the public domain were entirely the responsibility of the person who fired. However, the person who fired got a big "discount" in court because the victim had left the hospital (due to possible provocation or something else) against the advice of the medical staff, which is hard to believe due to other cases in the country.

The authorities now got a handle on the abolition of negative organizations, which is also good in my opinion, but under such a fog curtain that leaves such big doubts over the medical care about neglecting the patient's care, which leads to death and benefits the authorities in this way. Based on other unclear cases and personal experiences in the country, this claim may very well be true, which would need impartial criminal investigators.

Was Karttusen's death intentional on the part of the medical care, because it really caused the organization represented by Torniainen to be closed down due to Karttusen's death, which, however, is more the fault of the Finnish medical care by denying Karttusen high-quality and good care, than the death being Torniainen's fault?? The Finnish hospital only finished what Torniainen started in the station square. Having investigated these cases, Torniainen's movement could very well be revived on the condition that the hospital ceases the activity that raises such great doubts about the legality and

responsibility of its operation in respect of patient rights, even if it is a drug user that is expensive to society, because the boundary conditions for the operation of these organizations are however well defined in society and these persons can do almost as much damage in society with their own ideology, unlike the medical staff and especially (Ekelund, Lauerma, Korkeila, Karlsson, Hietala, Salokangas) because they do not have the opportunity to exercise power characteristic of authorities/doctors/researchers, or the actual opportunities to influence the attitudes of our society with their research results in the direction of their own ideals very minimal. In the ranks of these extreme right-wing organizations, you rarely see our country's politicians or Ekelund, even though his actions in the field of Finnish medical care are closer to the ideals of these organizations, real and proven actions to eliminate a certain subset of society using medical science, which is the root cause of the organization represented by Tornainen, and what Ekelund and his own tribe accomplishes 100% of mental health problems on behalf of. And where he is developing it with his research worries me much more than the school killings in our country and the existence of extremist organizations in our society. These cases only make Jari Aarnio look almost like a benefactor to the dark side of medical treatment compared to what Ekelund and his own tribe pilot, who conducts university-level, semi-false dissertations on staged mental illnesses to cover up the truth of what is possibly hidden under these mental illnesses and mental hospitals.

Therefore, Ekelund's actions are very similar to the movement promoted by Tornainen, which represents Hitler's Nazi supremacy, which also included the medicine that Josef Mengele piloted with his own tribe on Jews just like Ekelund, Lauerma, Korkeila, Karlsson, Hietala, Salokangas in Turku when they carry out a social cleansing operation with blackened mental patients in our country .

Medical benefit

Finnish medical care was removed from society, from the point of view of a "worse citizen" in a way that would be the fault of the person who fired. In other words, the medical care looked at a situation where it could have saved one person from dying. If this were true, this could already be called murder. The persons who were involved with Karttus in terms of child care and who had a caring relationship with this person should be put under criminal investigation and found out if they were guilty of murder.

KARTTUNEN'S MOTHER: WHAT ARE YOU DO TO MY SON DOCTOR OF HUS, ARE YOU INSANE??? THAT'S NOT SUPPOSE TO BE HEALTHCARE

DOCTOR OF HUS: IN THE NAME OF THE BEST INTEREST OF FINNISH TAXPAYERS, MEDICAL CARE AND FINNISH MAIDEN

I CURE THIS SON OF BITCH WITH A SINGLE THROW SO THERE WOULD NOT BE ANY OF TROUBLE AGAIN AND ANYWHERE

FPF: OK GUYS, LET'S DO SAME THING AS NORMAL IN THESE SITUATION LIKE CLOSING THE EYES WHEN THE "DOCTOR" IS DOING "HEALING" IN THE NAME OF THE MEDICINE AND FOR THE BEST INTEREST OF FINNISH MAIDEN AND TAXPAYERS WHAT IS THE NEXT STEP TO OUR RAISE OF SALARY.

NURSE: OUR DOCTOR WHO HAS BEEN GIVEN THE VERY BEST OF EDUCATION FROM THE EXTREMELY CORRUPTED DOCTORS OF TURKU UNIVERSITY AND HE START TO BE SO GOOD AT THE CORRUPTION OF MEDICINE THAT THIS KIND OF ACTIVIES CAN BE DONE UNDER THE EYES OF THE FINNISH POLICE FORCES AND VALVIRA IN THE MIDDLE OF THE DAY

Legal killing by medical care

As far as I myself have familiarized myself and studied the matter, medical care is of course constantly dealing with death and for them it can be a very routine process in the cycle of life, but the development and development of such activities and competences can only be possible in very closed conditions and as an investigative journalist my eyes are firmly on the Hannu Lauerman prison mental hospital. Jari Aarnio has been a good example of turning the police to the wrong side of the year, and this operation of the prison mental hospital in Turku must receive a tough criminal investigation in order to find out the activities carried out in the institution. Just like oath-keepers in democratic societies, the leaders of institutions like this should also be given the strictest continuous working hours on earth, because this kind of work atmosphere changes people, and that is true, and the drug unit in Helsinki is the best example.

I have been in e-mail contact with the management of the VTH prison mental hospital regarding patient meetings, also bringing up my doubts about these places in e-mail, and the answers have been really short sentences, which only raise doubts that all the wrongdoing in these institutions can possibly be carried out within the closed walls.

VALVIRA'S OPERATIONS IN FINLAND

Karttuse's own view of the medical treatment was to make sure that this person would experience a natural death due to the metabolic reactions after the trauma, and indeed, the tenth performance here came from the medical care perspective. When the boys of VALVIRAN, together with the KRP's tin policemen, are still watching this activity with blank eyes, of course the question arises that what is the actual purpose of this institution in Finland, other than to collect taxpayers' money for nothing, when they don't even respond to any of the complaints that I have sent there. Complaints related to the actions of Ekelund, Salokangka, Lauerman, Hietala, Karlsson, Korkeila in our country and where they are taking it under the guise of their own research results, with the help of which a selected group of Finnish psychiatrists can stage imaginary mental illnesses for their desired patients with drug treatment that is supported by the research results of these corrupt researchers on staged patients.

Valvira's operation in Finland is more to create a false image of official supervision that nothing illegal happens, even though behind the facades a cleaning operation of problem citizens is carried out through medical treatment.
