According to Markus Rantala, antidepressants treat symptoms and not root causes. When the symptoms are, for example, closed-mindedness, this could be treated with alcohol, which somehow removes inhibitions and people become more open.

When medicine has started "feeding" chemical compounds with a formula similar to olanzapine, it's like giving patients alcohol for symptoms of depression, which has practically no side effects even in the long term, is a good indication of the intentions of modern medicine in relation to patients when it is feeding mental problems that are medically non-existent and imaginary psychological diseases, these drugs which are very similar compounds to LSD, which is also a medically developed substance which is registered in the criminal code.

According to Rantala, the factors that trigger depression

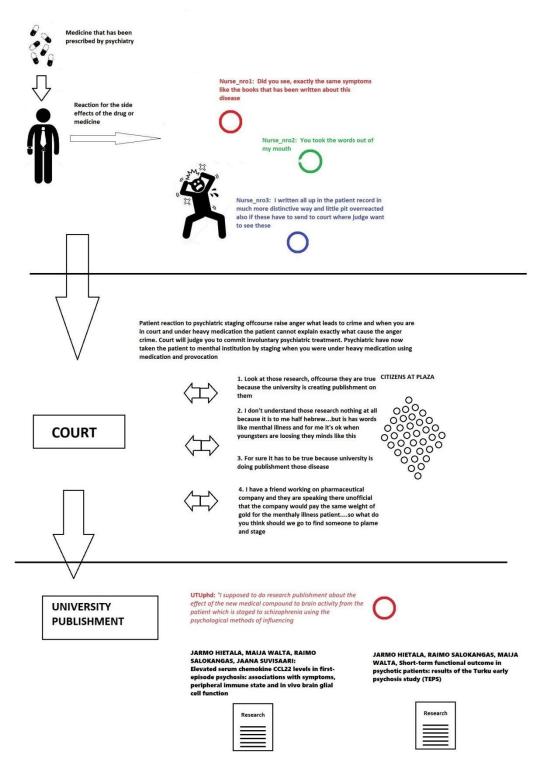

Rantala talks a lot about chronic stress and low-grade inflammation as factors that trigger depression.

In my circle of friends, a person had received a wound through which some bacteria had entered the body, which took my friend's "ability to function normally". I remember he received antibiotics from the emergency room because the CRP was something like 800 and this is the truth about human infections that are the result of some normal defense mechanism that is activated when there is some bacteria or a wound in the body that triggers antibody production.

It is really disgusting to watch from the sidelines, completely powerless, the ruthless plans of these professors/doctors of the University of Turku against humanity, where the abuse of medicine plays a big role, which has been made possible by the deliberate misinterpretations of statistics without a scientific explanatory factor, which has made it possible to shift medically non-existent diseases to the side of medicine on false grounds. The only reasonable explanation for this activity is the opening of big doors for medical researchers due to the diseases of their patients, who are completely dependent on their sick patients in the name of which research work can be carried out, because animal experiments are apparently quite boring. This research work to map the secret of the human body, which is carried out under the guise of patients' imaginary diseases, is like the holy grail of medicine, which enables any kind of research, because the disease that we are researching and curing does not even exist, medically speaking, but this is what the professors and doctors of the University of Turku tell the public.

Neurotransmitters specific to depressive types as manipulated by Rantala

When Markus Rantala talks with a big mouth about how different types of depression are "neurochemically different and how the neurotransmitter behaves differently". At this point, I can't help but notice the fact that humans are an attractive environment for psychiatrists to study humans and their brains, the effect of trillions of electrochemical and chemical reactions on the brain and, in general, on everything that happens in our body with the help of the brain, and how these reactions can be disturbed by chemical compounds and what it causes in humans.

It is a big question mark, what atrocities are being done to patients in the VTH department led by Kerava Auervaara and in other mental hospitals in the name of medicine, and which can nevertheless be covered up in the form of delusions created for the patients, but the research results of these professors at the University of Turku give a pretty good picture of the truth of what these institutions hold and what they are trying to do to cover up in every possible way with patients' imaginary delusions and their non-existent treatments that should cure them

Rantalan who talked himself into a bag in an interview

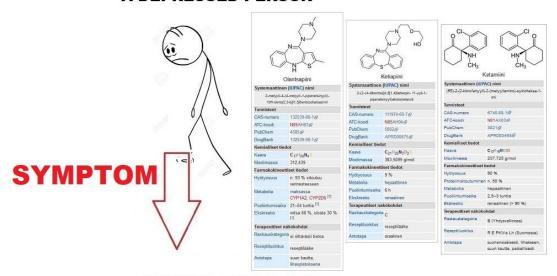

At the beginning of the video, Rantala talks about how depression should not be treated with drugs at all, but before the interview he advertises the effectiveness of treating depression with drugs, which is almost as misleading as the disinformation series produced by the state propaganda machine YLE about the treatment of depression with ketamine and the electrotherapy clinic accompanied by truck driver Jan and handyman Jantusen.

ISOLATION FROM SOCIETY

A DEPRESSED PERSON

PANIC DISORDER

The description above is the result of my own investigations as a crime reporter because they have shown that this part of medical care is a very free area for soloing in the name of "disease", which is guided by the interpreters' own academic careers, unlike mine, which is characterized by impartiality and the defense of the rights of a minority group. In the name of the operation-free environment of this part of the medical care, these problem citizens are fed harsh chemical compounds for medically non-existent diseases.

At the beginning of the video, Rantala talked about the root causes of depression, i.e. what causes depression and what should be invested in. I myself agree with Rantala on this, i.e. cleaning the living

environment of individuals from harmful factors, which in the case of the problem citizens I represent are the systematic unfair actions of the authorities that are systematically targeted towards these individuals (the killer of Emilia Nieminen, the killer of Hyvinkää, the school killers of Kauhajoki and Jokela, and the Ylivieska church arsonist). The church arsonist in Ylivieska, who had also been dropped from working life and nothing was done about this, was fed only harsh chemical compounds for a medically non-existent disease, which justifies the patient's slander in the future trial, bearing in mind where these actions and medications inevitably lead to with provocation.

In the middle of the video, Rantala talks about how "different depressions are neurochemically different, so their treatment is also different, which means that there is no one right medicine". So at this point, Rantalainen would be treating the symptoms of depression with medication, and not so much the factor causing the depression. Depression, which is a medically non-existent disease, its treatment is certainly very varied, even with medication, but if we look at cases that lead to shocking acts, I take as an example the case of a foreigner named Andreas Lubitz, who was treated with Olanzapine, which causes major suicidal thoughts, which is precisely suitable for causing an act that shocks society when it comes to an airplane driver...but as I suspect from the actions related to the cases in Finland, this may also have been a deliberate act of psychiatry that wants to create diseases based on witchcraft on Earth, in the name of which innocent problem citizens can be burned on the altar of medicine because of the academic careers of some researchers.

The association between low-grade inflammation and depression

Rantala has done what the friend club of Turku universities Ekelund, Larma, Karlsson, Korkeila, Salokagas expected from him, which is obvious if you look at the speeches of this friend club. Rantala brings low-grade inflammation to the context of this depression, which in itself has received the only truth cancer patients like the truck driver Jan who was in the YLE documentary, who also in the Turku way is lobbying for these diseases to problem citizens suffering from autumn depression so that they can be driven to a premature grave or, at best, to a mental hospital.

Hasse "who is not interested in power" is driving depression into cardiovascular diseases, which occur most obviously in these cancer patients, to "medicate" with harsh chemical compounds, there is a real medical disease such as cancer. When these diseases have been credibly transferred to the autumn depression, the deaths of these problem citizens will not raise any doubts in our country's police, who lie in a deep hibernation regarding crimes.

https://www.finnishcrimereporter.com/hasse-karlsson

Rantala who talks with a bigger mouth about inflammation and the connection between it and depression is a little true only with those patients who have cancer like the truck driver Jan in the YLE documentary, but this should not be confused with the depression of an autumn day because it is obviously the key to medical examinations with patients in our country's mental hospitals, while one of all time from the cruelest group of friends in the field of medicine is creating justifications to use human rats to advance their own academic careers at the expense of the health of our problem fish with the help of a self-developed lie, for which they are rubber-stamping a solution in public.

THE THEORY THAT DOCTOR RANTALA ADVERTISES ABOUT DEPRESSION

https://www.youtube.com/watch?v=WoubWDStqlc

Rantala, who brings an explanation from his own area of expertise, i.e. evolutionary psychology, to these psychiatric, i.e. medically non-existent diseases, only helps the professors of the University of Turku to cover up their own crimes against people and the misuse of medicine, because if someone believes Rantala's theories about a medically non-existent disease that would develop like any living species or bacteria on Earth, is only suitable to cover up the truth that I am running after and which seems to be largely a crime caused by misdirection and corruption on the medical side, targeting our problem citizens who want to be harnessed as medical human rats for the studies of researchers at the University of Turku.

I am not filing a criminal report against Rantala to the police, like his friend club at the University of Turku, Ekelund, Lauerma, Karlsson, Korkeila, Hietala, because I do not see that Rantala is directly guilty of crimes by lobbying these diseases to people who do not understand the matter, unlike his new best friends from the University of Turku, of whom I have left Finland for the police criminal complaint because they have already committed a crime when they have collected patients from our mental hospital for their research results on whom they have performed medical examinations in the name of imaginary diseases, where however only the function of cells during the disease is studied, where however with the highest probability the effect of some chemical compound on the functioning of human neurons has been studied.

https://www.finnishcrimereporter.com/turku-early-psychosis-study-teps

My criminal complaint against this Turku University friend club is necessary so that in the future, when the crimes they commit against people are seen more clearly, they and their ideological descendants can be stopped and their crimes in the name of medicine that they have committed against people can be found to the bottom.

TREATMENT OF DEPRESSION LOBBYED BY RANTALA

The operating model for the treatment of depression, which uses harsh chemical compounds, cannot come from anywhere else than the unscrupulous plans of the university club he represents for our problem citizens. Our mental hospitals which are actually medical research units specializing in illegal human experiments on the effects of chemical compounds on brain functions, carried out under the guise of depression.

Keravan Auervaara(Lauerma) has created such conditions in these places that no normal person can survive in their full sense, which is apt to create an atmosphere based on hiding the illegalities of medicine for the sake of one's own academic career at the expense of the health of these black-painted human rats belonging to the minority group.

MARKUS RANTALA A CRIMINAL IN THE EYES OF HANNULA

As a criminal investigator, it is clear to me that a blow of this magnitude, which is driven into the ground by the professors and doctors of the University of Turku, which enables and justifies the misuse of medicine with our problem citizens, even after years of training, Rantala cannot keep the script of a lie of this magnitude continuously in sight, of which he will inevitably leave traces in other words, for this interview, when he sometimes talks about the treatment of depression without drugs and with drugs in a completely contradictory way.

It is really pitiful to see how the friend club of the University of Turku has crushed a mentally insecure taekwondo girl from Turku, who, in the midst of her own lonely singleness, in desperation has gone to seek spiritual approval from the friend club of the University of Turku, the price of which has been set the marketing of medical atrocities in the name of empathy and pity, which is carried out by almost the most respected and trusted in our society from the post, i.e. from the title of professor/researcher/doctor in one's own field, which reads close to medicine.

Rantala's essence fully communicates his kindness, which is difficult to hide next to a lie of this magnitude, which his insecurity in interviews most clearly shows when he tries to beat himself up with memorizing the lines with a trembling voice, however, as a doctor of this level, he is aware of what he is involved in, what he is doing and what he can get out of it to follow when caught.

This same uncertainty cannot be seen, for example, in Auervaara from Kerava, whose speeches about evil come straight from the heart, without learned phrases or fear of what may follow from this activity if caught, when this activity is most obviously an activity blessed by the leaders of our country.

The evil that has taken over the patients of Auervaara in Kerava, when they have stabbed their fellow gang members because of an unprovoked quarrel, has nevertheless been quite normal behavior for a drunken and drugged ape throughout history, however, in all its cruelty, nowhere near the levels that have been perpetrated by the most merciless beast on earth, i.e. the white man and which a friend club formed by Turku University professors is doing the witch hunt created by the medieval church of monkeys in the name of mental health problems by mixing this activity with medicine.

These drunken knife junkies who stab each other while drugged are completely different in their brutality from the actions of the Auervaara friend club in Kerava, which are carried out openly and with full strength of soul and body. They are the abuse of medicine in the name of the academic careers of their own friend club and the revival of the medieval witch hunt in Finland under the guise of mental health problems, in the name of which our problem citizens can be burned in turun in the university's doctoral naming ceremonies according to the theme of the Middle Ages in the 21st century.
