

**FINNISH HEALTHCARE, VERY DANGEROUS PLACE TO GO IF YOU ARE SECOND CLASS CITIZEN IS THESE VAGUE DEATHS A SYSTEMATIC OUTPUT OF MEDICAL CARE WHICH SUPERVISION IS COMPLETELY NON-EXISTENT**

**RIEPPONEN/KOKKI DUO FROM NURMIJÄRVI EMERGENCY SHOW ME HOW SYSTEMATIC AND ALLIED MEDICAL CARE STAFF IS IN FINLAND WHAT COMES TO TREATMENT OF "not wanted patients". THERE WERE THE SAME MISLEADING AND BAD TREATMENT WITH ME THAT WAS WITH THE CASE KARTTUNEN AND THIS IS NOW RECORDED AND PUBLISHED IN LINKEDIN**

Riepponen's actions with me only prove that Jimi Karttunen was murdered in HUS to avoid spending the state elite's money. This activity, just like Riepponen, is not done alone, but in my case, the nursing staff of Nurmijävi was 100% involved in this misleading and infecting me.

Riepponen's action also gives more support to the ruthless plans of Turku University professors with our problem citizens, who want to use medicine by force as human rats in the name of medically non-existent and imaginary diseases.

Riepponen, who is apparently not alone with his ideology, i.e. regarding the misuse of medicine, which is targeted with careful consideration to individuals who are unable to defend themselves against this activity and their words are not believed.

Actions like this, where the patient is intentionally and knowingly infected, of course raises the question of how deliberate, systematic and planned was the development of the HIV virus and its transmission to the homosexuals of the past, and whether the most ruthless beast on earth, the white man, was deliberately in Africa infecting the people with the HIV virus, which yes would greatly limit Africa's explosive population growth because the sick studies of Riepponen and Turku University professors on our country's staged problem citizens are almost 100% proof of these ruthless actions I am writing about.

## **VISIT TO THE NURMJÄRVI ER 12.04.2019 at 17:00 (HENRIIKKA RIEPPONEN)**

After leaving Focusplan in 06/2018 (article to come), I have been troubled by constant muscle twitches in my thighs and eyes, and constant numbness in my legs and hands. Twice the numbness has been so intense that I've been a little panicked that it will lead to some sort of permanent condition.

### **Nurse Päivi Kokki who does not use disinfection when taking samples**

When I went to the emergency room in Nurmijärvi, I was taken CRP during the recording phase because the nurse wanted this. However, he did not clean my finger with a disinfectant and before taking CRP I said to the nurse that "shouldn't the finger be disinfected?" The nurse replied "no need". Well, at this point, of course, I thought that I would get wounds from that when I build everything. In the evening of the same day, I felt that I started to get hot everywhere and I had hot waves from my toes to my head, this was mostly felt on the surface of my skin and I felt really bad for two days, as if I had a fever. Of course, I didn't have to go to the emergency room again because of this, because a lot of things have already happened to me here....

When I have researched the almost intentional mistakes that happened in our medical care, which caused our problem citizens to die, Päivi Kok's actions did not reduce my doubts at least. These persons are clearly playing with the spirit of their patients, where unfortunately they even sometimes succeed.

Of course, there is a big question mark as to what the motive behind these cases could be, but I will put my own version here. If we look at what happened in Hyvinkää in 2012  
[https://fi.wikipedia.org/wiki/Hyvink%C3%A4%C3%A4n\\_joukkoampuminen](https://fi.wikipedia.org/wiki/Hyvink%C3%A4%C3%A4n_joukkoampuminen)

### **Medical retaliatory measures**

Has the anger and bitterness caused by the deaths in Hyvinkää triggered a desire for revenge in our medical care, which is then carried out on our problem citizens chosen by the medical care just to make sure that they would not kill their possible future innocent victims, so the medical care has taken this into account and is still very active. However, this is a bit wrong in that I see psychiatry as entirely to blame for the fact that Hyvinkää's death happened in the first place, so the hospital itself can only blame itself for this.

However, Jarno Laapotti died in 2008, so if the background of his case was the intentional action of medical care, it only proves that this action has happened before and it did not start after the Hyvinkää incidents in 2012. However, this case could have brought efficiency to this activity, which we can read about in the newspapers every now and then.

### **Päivi Kokki's methods give support to Jarno Laapotti's death**

My childhood friend who died in 2008 initially had a pulmonary embolism, which he survived, and after that he suffered a cerebral embolism or cerebral hemorrhage....the exact cause of death is not known. Today, Laapotti had also gotten lost in the aggressive advertising services in Ylivieska that

psychiatry provides to their patients, of whom unfortunately too many second-class citizens have died within the scope of these services.

For a long time, I have had a suspicion behind Laapotti's death that someone simply drank or fed him something toxic, which caused his blood to clot.

Accusations like this towards our authorities are classified as mental illness in Finland by Dr. Hannu Lauerman, so saying this out loud can lead to official institutions in Finland, which are as closed off as North Korea, which I myself have been able to find out when Olena contacted the ministers of our country and the people in charge of medical care about my desire to meet people in mental hospitals in our country who the reported cases have aroused my interest in the illegal actions of the authorities and how these patients appear in the medical studies of the professors of the University of Turku, where they are investigating the imaginary mental illness of the patient, which is diagnosed on the basis of behavior using cutting-edge medical technology. In these studies, which are carried out on patients whose autonomy has been taken away so they cannot refuse the studies, the effect of chemical compounds at the cellular level is actually studied and of course what else modern medicine wants to study on these human rats.

Psychiatry whose activities radiate undirected and systematic illegal activity in their actions where patients are deliberately driven to the brink of natural deaths, where getting caught is extremely unlikely with the knowledge of the Finnish police. This theory, which I initially offered for Laapot's death, enjoys an extremely high level of immunity in terms of being caught, because such suspicion in the direction of medical care has been diagnosed as a mental illness, and we unfortunately have a lot of false evidence of that in Finland because the police do not perform their duties.

However, my suspicion about the cause of Laapot's death leans more towards Kok's procedure with me and the death of Dextra's patient, where the patient got a bacterial infection during surgery, which may actually be as intentional as Kok's methods for me, where he deliberately did not use disinfectant even though I pointed this out to him. Even Laapotti could have gotten these blood clots as a result of a deliberate action if, for example, he has given blood tests, in which case the nurse has acted like the Koki taika Dextra nurses.

<https://yle.fi/uutiset/3-9854499>

<https://yle.fi/uutiset/3-9153691>

<https://yle.fi/uutiset/3-9166782>

Laapot's murder is also supported by Hasse Karlsson's actions in the name of the University of Turku, how he deliberately misreads the statistics so that he could transfer the physiological diseases associated with cancer and other medical diseases to autumn depression, a depression which unfortunately also occurs in connection with cancer and other medical diseases, which patients mentally harmful.

If Hasse Karlsson succeeds in this project, random deaths like Jarno Laapot's will not raise any kind of suspicion in any direction when problem citizens simply start dying after going to psychiatric clinics that are positively advertised by Yle's propaganda media house, where many will face a natural death, albeit an arranged one, just like in the case of Jimi Karttusen.

<https://yle.fi/a/3-12433977>

These actions from the medical care are like Jari Aarnio's re-ascension to his throne, from which he distributes negative statements to the people based on his own accusations, which go like a false five to the people.

### **Riepponen's belittling behavior towards me**

At doctor Henriikka Riepponen's office, I told my doctor all my symptoms again, as I did a year ago, as well as these numbness in my hands and feet, as well as the twitching of my legs and eyelids. I also told how skin overgrowth has appeared on my hands, which I showed Henriikka.

From Henriikka, I only received belittling behavior and comments like "have you done construction work" when he commented on the overgrowth of leather. I've had to find out myself about diseases like this, which are suitable for hand overgrowth, it's quite common in muscle infections, which could explain this because I've had really sore muscles and I've had to rub them a lot

When I felt numb, Henriikka felt my scalp and asked "do you feel this" and so she held my fingers and repeated the question. Well damn, of course I feel, but when I had a situation of numbness, I wouldn't have felt if someone was holding my finger.

If we look at the level of medicine that Riepponen offered me, he actually offered me a medical service from somewhere at the beginning of the 20th century, which must have included squeezing fingers and making diagnoses based on them, even though we have extremely high-level medical technology in the country that can be used to examine a person, but more obviously these devices have only been spared for studying human rats at the University of Turku.

I got a referral to Hyvinkää, of course, which may have been dictated by necessity, but this was canceled for some miraculous reason, which I don't know now. Here again, it becomes clear that I simply don't want to be examined properly and it shows as fluff and belittling.

## Riepponen's doctor's referral

The screenshot shows a patient record page from Kanta.fi. The page title is "Käynti 12.4.2019". The patient's name is Hannula, Raine Ossian. The page is in Finnish. The main content is a referral from Riepponen, Henriikka, a general practitioner at the Nurmijärvi Health Center. The referral is dated 12.4.2019. The patient's symptoms include muscle twitches and weakness. The doctor's assessment is that the patient has a neurological condition and that the referral is not necessary. The doctor's recommendation is to refer the patient to a neurologist. The patient's medical history includes a stroke and a heart attack. The patient is currently on medication for high blood pressure and cholesterol. The patient's last visit was in 2018. The patient's next visit is scheduled for 2019. The patient's contact information is provided at the bottom of the page.

Nyt 2-3vk ajan käsissä ja jaloissa ollut useamman kerran ohimenevää sukkamaista tunnottomuutta, joka helpottaa ravistelemalla. Kokee jaloissa ja käsissä lihasheikkoutta. Lenkkeily, juoksu raskaampaa viime kesästä lähtien. Lihaskipuja, lihasnykinää erit. reisissä useita kertoja päivässä. Sähkömäistä tunnetta reidestä jalkaterään. Vas silmän näön kokee heikentyneen, katseen kohdistamisen ongelmaa.

Nykytila (status)  
Hiukan hätäntyneen oloinen. Yt hyvä, liikkuminen normaalia. Aivohermostatuksessa ei esiin poikkeavaa. RÖmberg, peruskoe, snk, ddk norm. Ala- ja yläraajojen refleksit norm. Ala- ja yläraajojen voimat ja tunnot symmetr. Lihaskinöitä en näe.

Suunnitelma  
> mitään akuuttia ei tule esiin tutkittaessa. Yritetty useamman kerran selvittää potilaalle, että kyseessä ei ole päivystyksellisesti hoidettava asia ja että varattaisiin omalääkärille pikimmiten aika, jotta asiaa voidaan selvittää rauhassa. Hän ei kuitenkaan tyydy siihen, vaan intää jatkuvasti, että erikoislääkärille on saatava lähete nyt heti. Potilasta oli vaikea saada lähettämään päivystyksestä ellen tee lähetettä. Päädytään tekemään lähete neurologialle.

In the referral made by Riepponen, you can see how he has recorded that he "argues against" the referral. I have tried to seek help from our medical care for the muscle twitches that started after I left Focusplan and no one in our medical care wants to provide the service that the law says, but the only thing Riepponen is willing to give is his own judgment towards his patient. These kind of records can actually be a sign when sending for further tests that the receiving doctor there knows that the patient is now being sent back home, just like in Karttunen's HUS, even though he had a post-trauma metabolic reaction in his body, where he finally died when the guy was pumped full of antidotes from all over the world.

This kind of recording in the patient records is close to branding, so there is a big question mark, how the doctor who follows the referral will act in these situations when other stigmatizing information has been recorded in the patient records.

15.04.2019, Terttu Johanna Heikinheimo-Connell  
Lihasnnykinät, -heikkous, puutumiset

**Diagnosi: lähettämisen syyn diagnoosi**

## Riepponen's actions support my claims about bad treatments in medical care

Because as a private person, I investigate the bad treatment methods directed at our problem citizens, which in the worst cases they die of which the best example is the murder of Jimi Karttusen at HUS, which was made possible by bad treatment and deliberate misinterpretations of the patient's condition..

At least Riepponen's actions with me did not remove my doubts about his second-class medical care services, which has already proven to have caused one person to die. Investigating Karttusen's

murder is of course very challenging because no one is ensuring the impartiality of the police, and of course it follows from this that criminal investigations can, if necessary, be very nominal in the direction of medical care.

Terttu Heikinheimo-Connell certainly handled the referral to the extent permitted by the law, however, even if he wanted to see the patient, and these actions clearly showed a sense of humor, just like in the case of Karttusen, where he eventually died.

It is clear that the actions of this area should be checked with impartial authorities and how can such persons be allowed to act as doctors when they avoid contact with patients who should be examined.

## RECORDED AUDIO RECORDING OF THE NURMJÄRVI ER

I describe my symptoms to Rieppos BM1

I describe my symptoms to Riepponen, which are muscle twitches, muscle pains, eye alignment problems, numbness, balance problems and muscle weakness.

I will tell you about the possible causes, such as the nervous system, which feels like electricity is being applied to the leg.

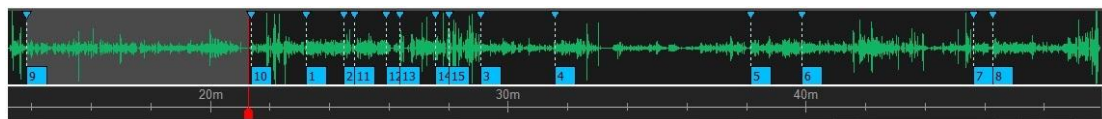

I tell Riepponen about the overgrowth of skin on the palms, to which Riepponen just says "have you been to the gym" and in the middle of the recording Riepponen says that: It sounds quite appropriate.

Rieppo has a terrible need to explain why the emergency room is not the place I should come to and what kind of purpose the emergency room is intended for.

Riepposen has a terrible need to block my referral and return me to private doctor Jari Ikonen, who has already blocked my referral once and said that this case of mine does not need to be investigated further. This of course means that my case would just be buried quickly and my nervous symptoms would not be investigated further.

This is indeed a very offensive action, which only indicates how Riepponen speaks of almost perfect "Hannu Lauerma", i.e. forensic psychiatry, where the prevention of medical care services is strongly emphasized with patients.

If we look at what happened to Jimi Karttuse, Riepponen's actions support 100% turning problem citizens away from medical care and preventing their symptoms from being investigated.

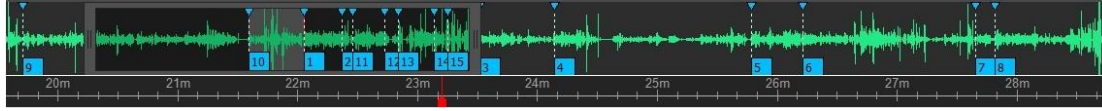

## Riepponen examines me BM2

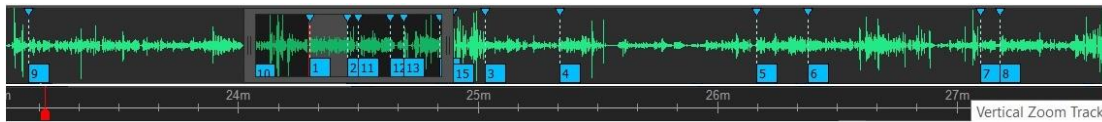

Riepponen examines me in an extremely rudimentary manner without any medical equipment.

Riepponen is looking at the computer the whole time when I tell him about the symptoms, at which point I ask Riepponen if he shouldn't focus on the patient and even if he should examine me, to which Riepponen replies: "do you think I'm just here looking at something else"

## Riepponen: I am the doctor BM3 now

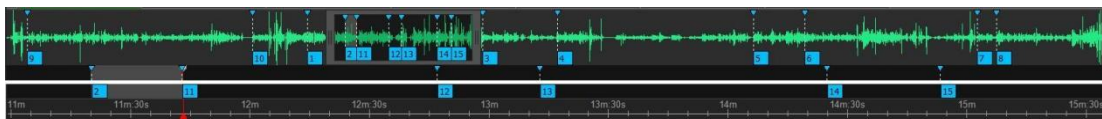

Riepponen who says: "and I want to say that I am the doctor after all, that I examine first, that I don't come here just to tell you what you want".

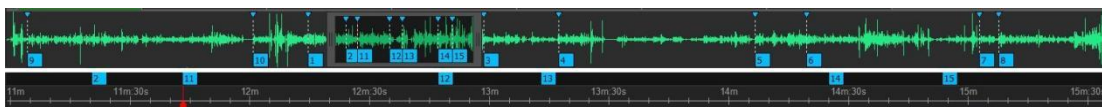

## Riepponen researches and makes research findings with the "I feel like a" feeling BM4

Riepponen justifies his own studies based on mutu feeling, what he does to me when he tells me to squeeze his fingers.

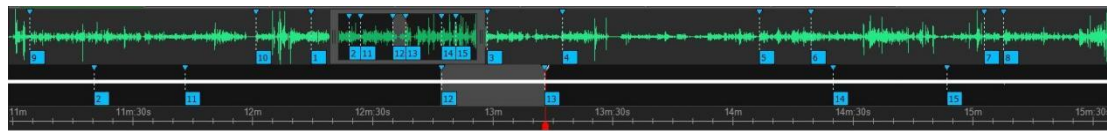

On the recording, you can hear how Riepponen says that it's not about what I say as symptoms, but what Riepponen himself is able to get out of me with his own mutu feeling and his completely elementary research methods, which Riepponen calls research findings and which Riepponen performs without any kind of medical equipment.

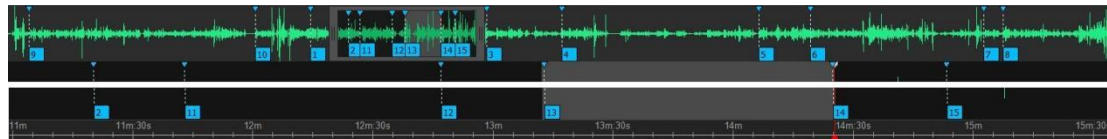

## I tell Riepponen about muscle twitching and weakness BM5

**Riepponen checks the field of vision BM6**

**Riepponen checks the blood circulation and tells me about muscle pain BM7**

**Riepponen tests the feelings BM8**

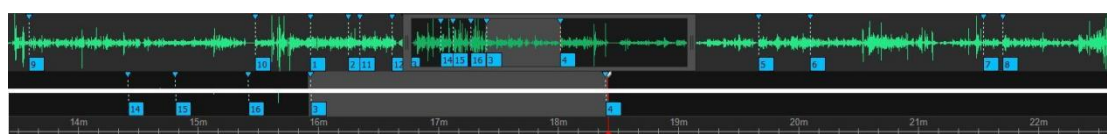

**I will tell you about my skin BM9**

**I express my desire for a referral to a specialist BM10**

**Riepponen says what to do BM11**

### **Riepponen is a tricky BM12**

At this point, I again bring up my desire to get a referral made by Riepponen to a specialist, where Riepponen shows his difficulty and how he just wants to send me back to my own doctor, Jari Ikonen, who already blocked my examination once.

If Riepponen were to succeed in this, it would mean the interruption of my treatment by Ikonen, and that is the reason why I hold on to the recording so much that Riepponen would make a referral to me because Ikonen would not do it.

### **Riepponen calls me out of the room to talk to the nurses about call time BM13**

Riepponen invites me to the nurses' reception room, where one of the nurses is also taking care of the emergency phone. Riepponen urges me to go to Klaukkala health center on Monday to the doctor Ikonen to take blood tests, but the nurses make an appointment for me on Tuesday, to which Riepponen says to go to Ikonen on Tuesday. This is extremely misleading activity in my opinion.

I commented to the nurses about the call time that if anything, I would rather go to the location and tell them about this situation because it is so difficult to remember everything on the phone. To this, the nurses say that I should go through an appointment, that they can only give call times.

You can hear from the recording how difficult and unwilling the nurses are with me and how they justify these actions with protocols.

It is obvious how services for "unwanted" citizens have been created in our country's medical care and how they are dealt with in an extremely systematic, orderly manner and above all in cooperation with other nurses, and this is clearly audible from the recording.

This is a clear proof of my claims based on Karttunen's news about how he was murdered in HUS with the help of deliberate bad treatment, which is clearly audible in my recording.

Karttunen, who left the medical care, has been put through a similar process by the nurses that I also had to do in Nurmijärvi's emergency room, where extremely misleading behavior is created for the patient in all the ambiguity, which is the reason why Karttunen also left the medical care.

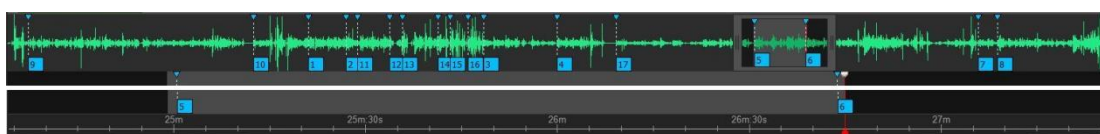

### **Nurses focus on another patient at the same time BM14**

After a long silence, I ask what the situation is and what you are doing, and the nurses answer that they are looking into the other patient's matters that are not my business, and the screen was always facing me so that I could have seen the other patient's information from that position if I wanted to look at it that way.

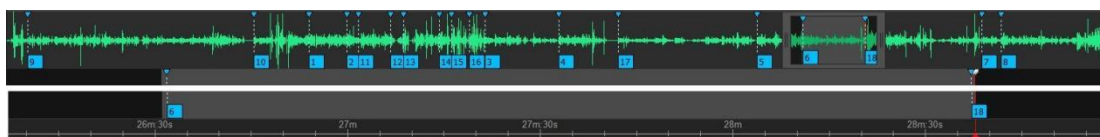

I tried to kindly say that they could focus on my case now that I'm here, but I only got the answer that they have more urgent things now.

On the recording, Riepponen addresses the other nurses, hearing how I have criticized his professionalism and how he stares at the screen.

### **Riepponen orders me to his reception room BM15**

Riepponen, who is really nervous at this point when they have misled me with the other nurses. In addition to this, it did not become clear to me whether time was reserved for me by the nurses and whether I have that time because all the actions so far were canceled by this inconsistency and misleading of Riepponen and his fellow nurses.

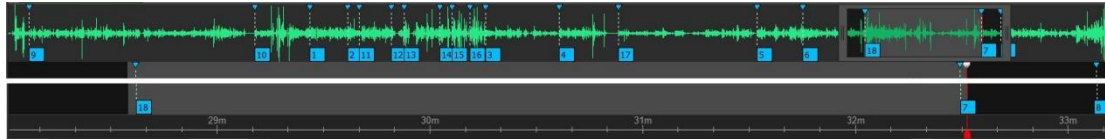

### **Riepponen falsely accuses me of criticizing his professionalism BM16**

At this point, Riepponen accuses me of criticizing his professionalism, which in reality is a lie, moreover, he laughs in a way that he himself is aware of the ridiculousness of his own activity and how this activity is performed with the approval of the patient and his spirit.

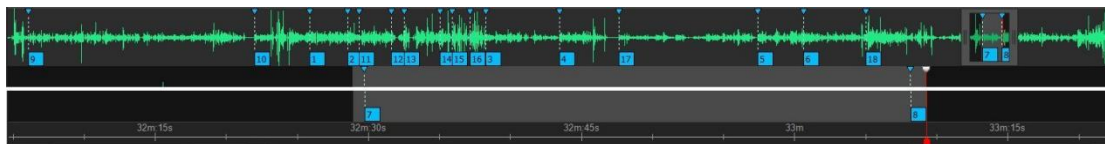

Riepponen stated with a mutu feeling that the nerves, including the functions of the cranial nerves, which functioned quite normally and there was nothing unusual, were functioning exactly as everything I told in the emergency room was canceled. At the end of the recording, Riepponen lets out a really long sigh that sounds more like a brain fart from his own actions, which is all absolutely incredible crap from a doctor if I may say so.

This kind of activity is apt to block all unwanted patients from medical care.

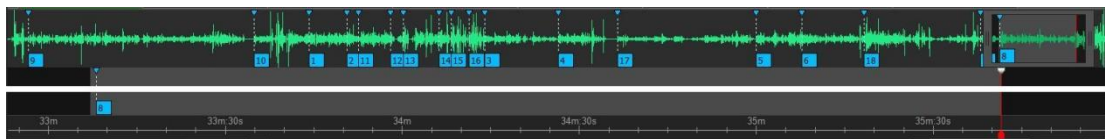

I can only imagine what kind of treatment other problem citizens receive in our country's medical care and how psychiatry has sent other unwanted persons to the grave prematurely as a result of this kind of activity, which is evidenced by the high suicide rates in psychiatric clinics, which is all a deliberate end product of psychiatry together with drug treatments.

**Riepponen sighs and reluctantly makes the referral to BM17**

**Riepponen: yes, I'm quite professional, I'm BM18**

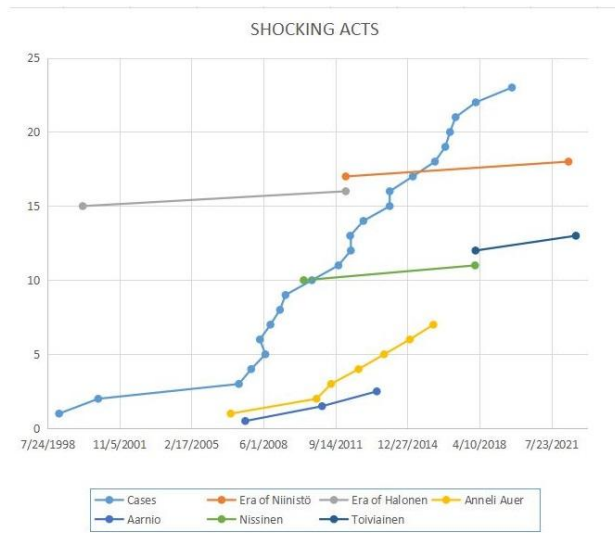

**The entire recording**

### **VALVIRA WHOSE SUPERVISION IS NAMELY ONLY**

Even my visit to Nurmijärvi proves that the supervision of medical care is completely in the wind and there, if necessary, natural deaths can be carried out in the name of care, which the Finnish police are only allowed to investigate nominally, and they might not even have the expertise to do this, of which there are already unfortunately many examples of cases where the police's own "mess up" investigator, Juha Rautaheimo, has become a well-known criminal investigator to me who messes up criminal investigations on the part of the police so thoroughly that no authority gets caught in illegal activities. Which, however, have ended up on my research table.

## Diseases that are intentionally given in connection with procedures

<https://yle.fi/uutiset/3-9854499>

If we look at deaths that have occurred in nursing care, of which the link above is a good example, the Riepponen / Kokki duo is a really good personal example of how a nurse REFUSES not to use a disinfectant even though the patient points out that such actions in nursing care are not injuries or negligence, but completely intentional actions that are carried out until the end although the patient points it out, which unfortunately has led to the death of many problem citizens.

If we once again look at the level and impartiality of police criminal investigations, it is completely clear that it is extremely safe to eliminate these problem citizens of our country with the help of our medical care, because the examinations have such good "good brother" relationships.

This region of our country definitely needs a new impartial authority to investigate these cases so that people like Henriikka Riepponen and Päivi Kokki would not have nested in this field even more and that they would be held responsible for turning second-class citizens away from our medical services.

## Nosocomial bacteria present in the hospital

I have heard about this hospital bacteria almost all my adult life, how it would have developed in a hospital environment.

However, in my career as a crime reporter, this has made me suspicious, based on how medical care works with its problem citizens.

We currently have Turku University professor Hasse Karlsson in the country, who almost tells the whole world on YouTube how he builds a bridge between the physiological diseases that occur with cancer and depression by deliberately misinterpreting statistics. If we succeed in this, the deaths of second-class citizens from fall day depression will be very common and it will not actually be caused by fall day depression but from something completely different....such as bacteria from the hospital

environment given during hospital visits due to the deliberate carelessness of nurses when they, for example, do not want to disinfect equipment.

If this activity in Finland receives the blessing of a professor-level person who nevertheless intentionally misinterprets the statistics, it is clear as day that not a single problem citizen's death can be solved in the future, when they cannot be solved even with the current expertise of the Finnish blue stupid group, even though the criminal investigator "messed-up" has retired with his forged wills.

I'm quite sure that Laapotti could very well have died as a result of something like this, which is practically a completely impossible task for the Finnish police to figure out when their only competence is circumventing the law, and it does that very well if you ask me.

### **UNEXPLAINED SUICIDES OF PROBLEM CITIZENS OCCURRING IN NURSING**

Now that psychiatry in Finland attracts our problem youth to psychiatric clinics to tarnish their reputation, their suicides seem more like a systematic and systematic activity alongside the activities of the Riepponen/Kokki duo, where the outwardly advertised activity is as different as night and day from the reality.

If an impartial and rigorous criminal investigation were put into these suicides, suspicious deaths from medical treatment and bacterial infections, there would be 100% sure to find exactly what I'm writing about, i.e. systematic and systematic activity, the purpose of which is to remove problem citizens from the books of the living and stage them as human rats for medically non-existent diseases in our country's mental hospitals.

### **YLIVIESKA CHURCH BURNING WHICH WAS REVENGE FOR NURSING ACTIVITIES**

My previously presented theory for the Ylivieska church burning, where Jouni Kauppila was lured into the "web" of psychiatry and with the help of manipulation he was made to believe in a medically non-existent disease, whereupon he was fed modern conversion drugs that also have effects that decrease brain functions, making it easier to provoke them into acts that shock the community.

The combination of Riepponen and Kokki only gives strong evidence to my claims, why the Ylivieska church burned down. Other churches that have burned down in Finland, there are no links to medical treatment in the background of the perpetrators, which is why they are more "unbelievable acts" by individuals for which harsher sentences could be imposed, but all these cases in which psychiatry has a hand in the game should be re-examined and involve the authorities of another state who really want to see the illegal actions of our country's medical care with our problem citizens.

In the background of the Ylivieska church burning, the unfair actions of our country's authorities towards a person and the unfair decisions of the courts come to the fore.

The burning of the church has been 100% revenge for the actions of the authorities, which the police simply do not want to see. This person has been in a completely ineligible state due to the drugs fed to him and not so much because of any medically non-existent "disease" that the news reports said he was suffering from. These modern-day conversion drugs that are fed to our problem citizens in the name of medical treatment are passing through our country as antidepressants and in the name of who knows what. With the help of a passive legal assistant, he was practically "played" in a collusive game on the innocent side, which practically means a new life as a human rat in a mental hospital where they are subjected to medical experiments in the name of an imaginary disease.

## **DEATH OF JIMI KARTTUSEN in HUS**

If we look at Karttusen's death in HUS, where with the highest probability a natural death was arranged for him, which was easy to hide under the starting post-trauma metabolic reaction by disrupting this reaction in every possible way.

Those who were involved in Karttusen's nursing relationship surely have a clean history, just like the Riepponen couple, that Karttusen's death does not cause any doubts, or even if it does, they will inevitably fall in practice because there is certainly no one to effectively and actively defend the sides of the dead problem citizen.

If you look at the coverage of what was done about Karttus, I was really surprised how not a single medical professional opened up in public to defend the murdered problem citizen, which speaks of the community spirit of this area when it comes to eliminating a problem citizen from the books of the living.

In Karttusen's background, there is the same misdirection as in my case and how these problem citizens are "kicked" out of medical care in an extremely critical situation where they would need intensive care monitoring and where they die. The hospital does a really outrageous trick here, that is, it decides to blame Karttus itself for this death even though it is itself to blame for abandoning the patient.

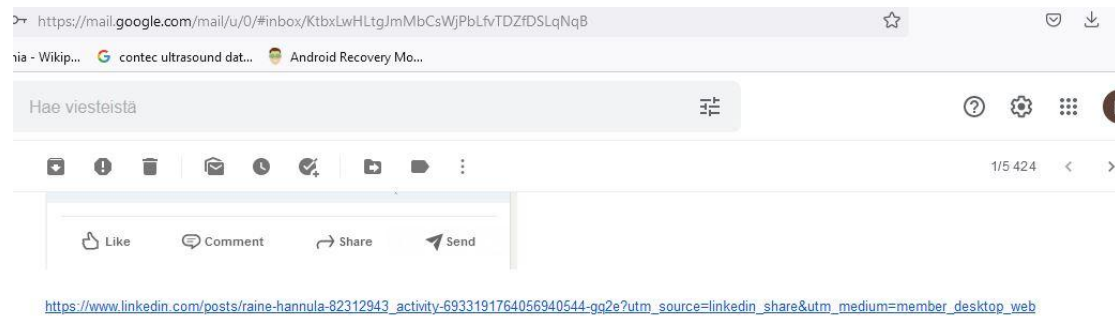

Karttunen, who was murdered in our country's medical care by the dirty actions of a lawyer, which is extremely difficult to prove even to me, did not receive any kind of support in the nominal rule of law that the doctors guilty of his murder, who collect the problem citizens of our country from wandering off the streets of the state with the help of medicine, would be held accountable.

## **RIEPPONE'S COMMON SPOUSE PASI RIEPPONE**

While writing this article, Henriika's actions towards me bothered me so much that I decided to send an e-mail to her husband, a priest from the Communist Party, Pasi Riepponen.

The message came back very quickly as follows:

**Riepponen Pasi** 11.52 (9 tuntia sitten) ☆ ↶ ⋮  
-> minä ▾  
Hei  
Toisten kuvien käyttäminen julkisesti ilman asianomaisen lupaa on laitonta. Teemme sinusta rikosilmoituksen. Kirjoituksestasi on olemassa kuvakaappaukset. Suosittelen ottamaan välittömästi pois kirjoituksesi.

It's obvious that Pasi's announcement that he will file a criminal complaint against me surprises me when I look at his wife's actions regarding me. Apparently, inappropriate actions performed in the name of medical care, which in themselves approach a crime, should not be talked about and that they should be buried.

Pasi's small "threats" do bother me a little, because having investigated these cases, it has not remained unclear to me how unfair the courts of our country are, starting from the police criminal investigations, on the side of problem citizens when their criminal investigations are viewed biased, which results in unfair judgments in court.

However, I've made a decision and I'm not going to cancel any of my LinkedIn articles and I stand by the problem citizens because I've obviously been there myself.

Pasi who works as a "church man" was born in the right era, in my opinion, when you look at what is happening in our country in terms of medical care, which has pushed itself into the role of a medieval church, to our problem citizens who are really being murdered for eating the money of those in power, which they have the right to control.

Of course, it is understandable how Pasi defends his own wife, who as a doctor, in her own stupidity, has taken a conscious risk of popping a future crime reporter in the hospital at the expense of my health...but in the name of truth, Pasi's actions are biased towards his own family member and if such actions are swimming in the hospital, it is possible to perform there precisely these "cleaning operations" for the state's thorn in our problem citizens, when this field Pasimaically takes its own side, even if it is a conscious crime, which puts the patient in the grave prematurely.

If there should be a criminal complaint filed here, it would be about Henriikka Rieppose and how he has acted as a doctor than the fact that I am bringing this person's actions to the public as a doctor when he is almost guilty of kicking a patient out of our country's medical care.

These "men of the church" also include Kari Ojalakin, leader of the Niuvanniemi Party, who has not allowed me into his institution to interview the persons I named, so that I can give up my accusations against these institutions, which in reality is most likely being done there

<https://www.mtvuutiset.fi/artikkeli/kirkko-tarjoaa-nuorille-walk-in-terapiaa-tasta-on-kyse/8332720>

Ps. I hope Karttunen stays dead, that ideological guys like Pasi Riepponen don't take him to court for defamation when Karttunen files a criminal report with the police about his own murder at HUS, which I have done on his behalf
